**PUMPOUT BOAT SUPPORT**

Any applicant that operates a stationary, land-based pumpout facility and provides support for a pumpout boat may be eligible for additional funding.

An additional \$2,250 can be requested if the land-based facility has a holding tank for waste disposal and incurs additional costs for waste disposal because they accept offloading waste from a pumpout boat, or have other costs **directly** associated with supporting the operation of the pumpout boat.

The amount of actual costs for this additional funding would be \$3,000, and at 75% reimbursement would be \$2,250.

It may be difficult to determine what percentage of the hauling costs can be attributed to boaters visiting the land-based facility and what percentage is for pumpout boat offloading. Therefore, for the purposes of this grant it will be determined that a maximum 90% of disposal fees may be applied to the additional funding allowance.

The applicant must provide certification, on the letterhead of the operator of the pumpout boat, stating the pumpout boat uses the facilities of the applicant for waste disposal or other services if applicable.

Both the applicant and the pumpout boat operator must complete a Pumpout Boat Support Certification that documents that no cost compensation has been provided by the pumpout boat owner for services provided. If there was compensation for services provided, detailed information must be provided.
